Income and Expenditure of Households and Living Conditions Survey In the past, income and expenditure of households and living conditions Survey have been in accordance with the urban and rural areas; urban statistics disposable income and the rural statistics net income. The NBS conducted survey of urban and rural households in implementation of the reform and integration since 2012, unified the name, classification and statistical standards of urban and rural residents income indicator, established a unified urban and rural integrated household survey. Qinghai Province began issuing new caliber household income and expenditure survey data since 2014. State and county began issuing new caliber household income and expenditure survey data since 2015. Data non - indicated the "old caliber" in this chapter are new caliber data from integrated reform of household income and expenditure survey.

Disposable Income Refers to the sum total of the households in the survey period, which can be used for final consumption and savings, namely, the income of the household can be used for free. Disposable income includes both cash and in kind. Calculation method: Disposable Income = Wage Income + Net Business Income + Net Income from Property + Net Income from Transfer.

Net Business Income refers to the members of the households or households get net income from production and business activities, equal to the total operating income deduct operating expenses, obtained after the production of fixed assets depreciation and tax.

Net Income from Property refers to the income received as returns by the members of the households or households of financial assets or tangible non - productive assets by providing capitals or tangible non - productive assets to other institutional units, households and personal, deducting the relevant expenses.

Net Income from Transfer The calculation formula is as follows; Net Income from Transfer = Income from Transfers - Transfer Expenditure.

Income from Transfers refers to the regular current transfers of the country, unit and social group to the households and the transfer of the regular income between households. It includes pension or retirement benefits, social benefits and subsidies, subsidies benefit farmers, policy subsidy, relief funds, regular donation, regular compensation and reimbursement of medical expenses that the government, the non - administrative institutions and social groups transfer to households. It also includes alimony income, regular donations and compensation be-

tween households and income send back by non - resident members of households work outside (including foreign) in rural areas (village) . It does not include the physical gifts between households.

Transfer Expenditure refers to regular or voluntary transfer payment of survey households to the country, unit, household or individual. It includes the payment of taxes, social security expenses, maintenance expenses, regular donations and compensation expenses, and other expenses, etc. .

Consumption Expenditure refers to the all the expenditures of households for consumption in daily life. It includes the expenses for the consumer goods and the expenses for the service.

The changes of survey indicators between the current integrated household survey and the old caliber survey of urban and rural household;

Reduced Income previously calculated income now does not calculate the income of the project mainly includes; land acquisition compensation income, the sale of housing premium income, sell collection of premium income, the sale of stock funds and other financial derivatives of premium income, lump sum pension, one - time compensation income, the gift of heritage and disposable income, lucky money, weddings and funerals gifts income, gaming income, etc. .

Increased Income refers to income calculated now and does not calculated previously that mainly includes; reimbursement of medical expenses, physical benefits, various social security (pension, housing provident fund, unemployment insurance), etc. .

Resident Permanent Members refers to the persons which meet one of the following three cases:

(1) living more than a month and a half over the past three months or three months in the future.

(2) living in the barracks, dormitories, workplaces, tents and boat house ,and back to the residence every month.

(3) the students in the school who are supported by the household.

Income Statistics Method for Employees Work Outside

Firstly judging whether employees work outside are the resident members, if so, the corresponding income and expenditure were calculated for the household income and expenditure; otherwise, only when out practitioners sent back to income behavior can be calculated as the household income, while its consumer spending not included in the household consumption expenditure.

a) Per capita output of gross output value of agriculture had been calculated at 1990 constant prices before 2004, and calculated at the current price since 2005.

主要统计指标解释

农林牧渔业总产值 指以货币表现的农、林、牧、渔业全部产品和对农林牧渔业生产活动进行的各种支持性服务活动的价值总量,它反映一定时期内农林牧渔业生产总规模和总成果。1957年以前的农林牧渔业总产值中包括了厩肥和农民自给性手工业(如农民自制衣服、鞋、袜,自己从事粮食初步加工等)。1958年及以后,林业中增加了村及村以下竹木采伐产值;牧业中取消了厩肥产值;副业中取消了农民自给性手工业产值,增加了村及村以下办的工业产值;渔业中增加了海洋捕捞水产品产值。1980年及以后,在副业中增加了农民家庭兼营工业商品部分的产值。从1984年起村及村以下工业产值划归工业。从1993年起取消副业,将野生动物的捕猎划入牧业,野生植物采集和农民家庭兼营商品性工业划归农业。从2003年起,执行新的国民经济行业分类标准,农林牧渔业总产值中包括了农林牧渔服务业产值。林业中增加了森林采运业产值。农业中取消了家庭兼营商品性工业产值,将野生林产品的采集划归林业。第一次农业普查以后,由于畜牧业产品年报数据与普查数据之间存在一定的差距,国家统计局农调总队对畜牧业年报数据与普查数据进行衔接,对畜牧业产值进行相应调整。

农林牧渔业总产值的计算方法通常是按农、林、牧、渔业产品及其副产品的产量分别乘以各自单位产品价格求得;少数生产周期较长,当年没有产品或产品产量不易统计的,则采用间接方法匡算其产值;然后将四业产品产值及农林牧渔服务业产值相加即为农林牧渔业总产值。

粮食产量 指全社会的产量。包括国有经济经营的、集体统一经营的和农民家庭经营的粮食产量,还包括工矿企业办的农场和其他生产单位的产量。粮食除包括稻谷、小麦、玉米、高粱、谷子及其他杂粮外,还包括薯类和豆类。其产量计算方法,豆类按去豆荚后的干豆计算;薯类(包括甘薯和马铃薯,不包括芋头和木薯)1963年以前按每4公斤鲜薯折1公斤粮食计算,从1964年开始改为按5公斤鲜薯折1公斤粮食计算。城市郊区作为蔬菜的薯类(如马铃薯等)按鲜品计算,并且不作粮食统计。其他粮食一律按脱粒后的原粮计算。1989年以前全国粮食产量数据主要靠全面报表取得,1989年开始使用抽样调查数据。

油料产量 指全部油料作物的生产量。包括花生、油菜籽、芝麻、向日葵籽、胡麻籽(亚麻籽)和其他油料。不包括大豆、木本油料和野生油料。花生以带壳干花生计算。

猪、牛、羊肉产量 指当年出栏并已屠宰、除去头蹄下水

后带骨肉(即胴体重)的重量。包括全社会范围内的产量。1996年前为各级逐级上报数据。1996年第一次农业普查以后,由于畜牧业产品年报数据与普查数据之间存在一定的差距,国家统计局农调总队对畜牧业年报数据与普查数据进行衔接。1999年以后,国家统计局在部分地区开展了猪、牛、羊、禽等主要畜禽品种的抽样调查,并用抽样数据作为国家定案数据使用。未开展抽样调查的地区和品种,仍使用各级统计部门逐级上报数据。

期初(末)畜禽存栏头(只)数 指报告期初(末)农村各种合作经济组织和国营农场、农民个人、机关、团体、学校、工矿企业、部队等单位以及城镇居民饲养的大牲畜、猪、羊、家禽等畜禽的存栏数。数据上报方式及数据调整情况同猪、牛、羊肉产量。

农作物播种面积 指实际播种或移植有农作物的面积。凡是实际种植有农作物的面积,不论种植在耕地上还是种植在非耕地上,均包括在农作物播种面积中。在播种季节基本结束后,因遭灾而重新改种和补种的农作物面积,也包括在内。它是反映我国耕地面积利用情况的一个重要指标。目前,农作物播种面积主要包括粮食、棉花、油料、糖料、麻类、烟叶、蔬菜和瓜类、药材和其他农作物九大类。

有效灌溉面积 指具有一定的水源,地块比较平整,灌溉工程或设备已经配套,在一般年景下,当年能够进行正常灌溉的耕地面积。在一般情况下,有效灌溉面积应等于灌溉工程或设备已经配备,能够进行正常灌溉的水田和水浇地面积之和。它是反映我国耕地抗旱能力的一个重要指标。

农用化肥施用量 指本年内实际用于农业生产的化肥数量,包括氮肥、磷肥、钾肥和复合肥。化肥施用量要求按折纯量计算数量。折纯量是指把氮肥、磷肥、钾肥分别按含氮、含五氧化二磷、含氧化钾的百分之百成份进行折算后的数量。复合肥按其所含主要成分折算。公式为:

折纯量 = 实物量 × 某种化肥有效成份含量的百分比

农业机械总动力 指主要用于农、林、牧、渔业的各种动力机械的动力总和。包括耕作机械、排灌机械、收获机械、农用运输机械、植物保护机械、牧业机械、林业机械、渔业机械和其他农业机械[内燃机按引擎马力折成瓦(特)计算、电动机按功率折成瓦(特)计算]。不包括专门用于乡、镇、村、组办工业、基本建设、非农业运输、科学试验和教学等非农业生产方面用的动力机械与作业机械。这个指标的统计数据主要来源于农机部门。

Explanatory Notes on Main Statistical Indicators

Gross Output Value of Agriculture, Forestry, Animal Husbandry and Fishery refers to the total value of products of agriculture, forestry, animal husbandry and fishery, and total value of services in support of agriculture, forestry, animal husbandry and fishery activities. It reflects the total scale and results of agricultural production during a given period. Prior to 1957, China's gross agricultural output value included barnyard manure and handicraft products for self-consumption (clothes, shoes, stockings, and initial grain processing undertaken by peasants). Since 1958, cutting and felling of bamboo and trees by villages and other cooperative organizations under villages have been included in forestry; value of barnyard manure has been excluded from animal husbandry; self-consumed handicrafts have not been included from sideline occupations, while the output value of industries run by villages and cooperative organizations under village has been included in sideline occupations; and the output value of fish catches by motor fishing boats has been added to fishery. Since 1980, the value of handicraft products made for sale by individuals in households has been added to sideline occupations. Since 1984, industries run by villages and under villages have been included in the sector of industry. Since 1993, the subdivision of sideline occupations has been cancelled, and the hunting of wild animals has been classified into animal husbandry, and the gathering of wild plants and commodity industry run by rural household have been included in farming. A new industrial classification of economic activities was introduced in 2003. Under the new classification, value of services to agriculture, forestry, animal husbandry and fishery is included in the gross output value of agriculture, value of wood felling and transport is included in forestry, value of industrial output by rural households is not included in agriculture, and the collection of wild forest products is taken from agriculture and included in forestry. The First Agriculture Census of China revealed some discrepancy between the production of animal products from the annual reports and that from the census. Efforts were made by the Rural Survey of NBS to adjust the output value of animal husbandry to make the figures from the annual reports consistent with the census data.

Gross output value of agriculture is obtained by multiplying the output of each product or by-product by its price, resulting in the output value of each single item. For a small number of products, annual output of which is not available or difficult to get due to the long production (growing) process involved, the output value is estimated through an indirect approach. The sum of output values of all products of agriculture, forestry, animal husbandry and fishery and services in support to those industries is then equal to the gross output value of agriculture.

Grain Output refers to the total output in the whole country including grains produced by State farms, collective units, rural households, as well as by farms affiliated to industrial and mining enterprises and other production units. Grain includes rice, wheat, corn, sorghum, millet and other miscellaneous grains as well as tubers and beans. Output of beans refers to dry beans without pods. The output of tubers (sweet potatoes and potatoes, not including taros and cassava) are converted into that of grain at the ratio 4:1, i. e. 4 kilograms of fresh tubers were equivalent to 1 kilogram of grain up to 1963. Since 1964 the ratio for conversion has been 5:1. Tubers supplied as vegetables (such as potatoes) in cities and suburbs are calculated as fresh vegetables and their output is not included in the output of grain. Output of all other grains refers to husked grain. Data on grain production before 1989 were obtained through the Comprehensive Statistical Reporting System. Since 1989, data from sample surveys are used.

Output of Oil-bearing Crops refers to the total production of oil-bearing crops of various kinds, including peanuts (dry, in shell), rapeseeds, sesame, sunflower seeds, flax seeds, and other oil-bearing crops. Soybeans, oil-bearing woody plants, and wild oil-bearing crops are not included.

Output of Pork, Beef, and Mutton refers to the meat of slaughtered hogs, cattle, sheep and goats with head, feet, and offal taken away. Data refers to the production of the whole country. The First Agricultural Census of China in 1996 revealed some discrepancy between the production of animal products from the annual reports and that from the census. Efforts were made by the Rural Survey Organization of the NBS to adjust the output value of animal husbandry to make the figures from the annual reports consistent with the census data. Since 1999, the NBS conducted sample surveys for the major animal husbandry products, such as hogs, cattle, sheep and goats and fowls, and the data from sample surveys are used as national finalized data. Those products, which are not covered by the sample survey, are still reported by statistical agencies level by level.

Number of Livestock or Poultry in Stock at Beginning (or End) of Period refers to the total number of large animals, pigs, sheep, fowls, etc. raised by rural cooperative organizations, State farms, rural individuals, government agencies, schools, industrial and mining enterprises, army, and urban residents at the beginning (or end) of the reference period. Data reporting system and data adjustment are the same as that in the output of pork, beef and mutton.

Sown Area of Crops refers to area of land sown or transplanted with crops regardless of being in cultivated area or non-cultivated area. Area of land re-sown due to natural disasters is

also included. This is an important indicator that can reflect the utilization condition of the cultivated land in China. At present, the sown area of crops mainly include the following 9 categories of crops: grain, cotton, oil - bearing crops, sugar crops, flax crops, tobacco, vegetables and melons, medicinal materials and other farm crops.

Irrigated Area refers to area of land that are effectively irrigated, i. e. relatively level land, where there are water sources or complete sets of irrigation facilities to lift and move adequate water for irrigation purpose under normal conditions. Under normal situations, irrigated area is the sum of watered fields and irrigated fields where irrigation systems or equipment have been installed for regular irrigation purpose. This important indicator reflects drought resistance capacity of the cultivated land in China.

Consumption of Chemical Fertilizers in Agriculture refers to the quantity of chemical fertilizers applied in agriculture in the year, including nitrogenous fertilizer, phosphate fertilizer, potash fertilizer, and compound fertilizer. The consumption of chemical fertilizers is calculated in terms of volume of effective components by means of converting the gross weight of the re-

spective fertilizers into weight containing effective component (e. g. nitrogen content in nitrogenous fertilizer, phosphorous pentoxide contents in phosphate fertilizer, and potassium oxide contents in potash fertilizer). Compound fertilizer is converted in regard to its major components. The formula is:

Volume of effective component = physical quantity \times effective component of certain chemical fertilizer (%)

Total Power of Agricultural Machinery refers to total mechanical power of machinery used in agriculture, forestry, animal husbandry and fishery, including machinery for ploughing, irrigation and drainage, harvesting, transport, plant protection, animal husbandry, forestry and fishery and other agricultural machineries. (For the power of internal combustion engines, it is converted from its horsepower into watts while for electric motors the output power is converted into watts.) Machinery employed for non - agricultural purposes, such as the machines used in township - run and village - run industry, construction, non - agricultural transport, scientific experiments and teaching, are not included. Data are mainly from agricultural machinery agencies.
